# Agricultural Medicine Unit

## Who are we?

---

The Agricultural Medicine Unit was established to enhance and develop healthcare services tailored to individuals' specific health needs and challenges in agricultural areas. This includes addressing occupational hazards, promoting safety practices, providing medical care for injuries and illnesses related to farming, and supporting the overall health and well-being of farmers, workers, and residents in agricultural areas. This supports King Faisal University's identity in food security and environmental sustainability, in alignment with the vision of the Kingdom of Saudi Arabia.

## Mission:

---

To enhance the health and well-being of rural communities through innovative research, education, and healthcare delivery in the field of agricultural medicine.

## Vision:

---

To be a local and global leader in agricultural medicine, recognized for advancing healthcare in rural communities, fostering sustainable practices, and contributing to society's overall health and prosperity, in alignment with the vision of King Faisal University and the Kingdom of Saudi Arabia.

## Goals:

---

- Identify and study the most common diseases and injuries in agricultural areas and among workers in the agricultural sector.
- Strengthen research tools and the innovation system regarding topics related to health care needed in agricultural areas.
- Conduct strategic partnerships inside and outside the university to support the unit's work.
- Organize seminars, lectures, practical courses, and community awareness campaigns for common medical diseases and injuries in agricultural areas.
- Formulate a plan for a postgraduate program in agricultural medicine.
